

CENTER LINE LOCATING

# WHEN ACCESS IS LIMITED, WORK DOESN'T STOP.

Remote sewer line flushing using portable easement jetter systems and extended hose deployment—allowing crews to reach infrastructure where hydrovac trucks can't.

COMPLETED FULL SEWER FLUSHING  
WITHOUT PLACING HEAVY EQUIPMENT  
ON THE SLOPE.

**REMOTE SEWER FLUSHING**  
Complete line flushing in  
hard-to-reach areas.

**EASEMENT JETTER SOLUTIONS**  
Portable jetter systems with  
extended hose deployment.

**STEEP TERRAIN CAPABILITY**  
Specialized equipment and experienced  
crews built for challenging terrain.

**BASED IN  
CHARLOTTE,  
NORTH CAROLINA**  
Serving municipal, utility,  
industrial & commercial clients.

Safe. Efficient. Reliable.

# Remote Sewer Line Flushing: When Hydrovac Trucks Can't Reach the Work

INSIGHTS • CENTER LINE LOCATING • MAY 28, 2026

*When access is limited, work doesn't stop. Portable easement jettors and extended hose deployment let crews flush sewer lines in places hydrovac trucks can't go.*

Some of the toughest sewer work isn't in the street. It's in the back of an easement, down a wooded slope, behind a tree line, or in the middle of a stormwater pond — places a hydrovac truck simply can't drive to.

That's the whole point of an easement jetter. It's portable. It moves with the crew on foot. And it lets us flush a sewer line clean even when the only thing the truck can do is park at the road.

## What an Easement Jetter Solves

Heavy equipment on slopes is a problem. It tears up the ground, it puts the operator at risk, and a lot of property owners just won't allow it. An easement jetter lets us walk the equipment in, deploy extended hose, and complete a full sewer flush without ever putting a truck on the slope.

Here is the kind of work that lines up well with this approach:

- Manholes set in easements behind homes or commercial buildings
- Sewer mains running through wooded buffer zones
- Slopes too steep, soft, or unstable for vacuum trucks
- Sites where surface protection is required
- Locations with limited or no truck access

## What the Job Looks Like

Our crews bring in a portable jetter and extended hose, set up at the closest safe staging point, and walk the hose down to the work. The line gets flushed the same as it would from a truck — we just don't need the truck to be next to the manhole to do it.

When the job is done, the line is clear, the slope is undisturbed, and the surface looks the same as when we got there.

## Why It Matters for Stormwater and Sewer Maintenance Programs

Municipalities, utilities, and property managers in the Carolinas are dealing with infrastructure that was built before many of these access constraints existed. Trees grew. Buffers were planted. Properties were developed around the easements. The lines still need maintenance — the equipment just has to fit the access we have today.

Remote sewer flushing closes that gap. It keeps maintenance schedules on track without forcing owners to choose between sewer access and the trees, slopes, or surfaces they want to protect.

## Talk to Us About Your Hard-to-Reach Lines

Center Line Locating handles remote sewer flushing across Charlotte and the Carolinas. If you have a sewer line your hydrovac truck can't get to, we probably can. [\[Request a CCTV & Flush service\]](#)/[request-service/cctv-flush](#) or call 704-315-5820.
